

POWERTRAVELLER

Powertraveller Ltd design, develop and manufacture an award winning range of portable power and solar chargers for electronic devices up to 24V.

Designed in the UK and tested to destruction in some of the world's most inhospitable environments, the products in Powertraveller's range are capable of charging anything from cell phones (including iPhone and BlackBerry) and iPods through to Sat Navs, iPads, netbooks and laptops.

Led by Jerry Ranger, a former Royal Marine, Powertraveller utilise the latest innovations in rechargeable battery and solar panel technology to produce a range of highly efficient, performance-rich portable power products.

From the waterproof powermonkey extreme for 5V devices and the iPad through to the mighty laptop charger, the powergorilla, each product comes with a selection of interchangeable tips for the most popular devices and the support of a company renowned for their expertise in the field of portable power.

powermonkey-eXtreme

“ The new waterproof portable charger with one touch friction swipe ON/OFF control, IP67 rated & 9000mAh capacity ”

UK portable power manufacturer Powertraveller Ltd of Alton, Hampshire, will be launching the powermonkey-eXtreme portable charger for 5V devices at the ISPO Show in Munich, 6 – 9 February 2011.

The powermonkey-eXtreme is the big brother to the very successful and highly regarded powermonkey-eXplorer, a charger that has quickly become the flagship product of the Powertraveller range.

The powermonkey-eXtreme houses a massive 9000mAh capacity Lithium Polymer battery and offers users real power in a compact, durable shell. The unit is capable of recharging most 5V devices, including an iPhone up to 6 times, a Garmin Edge 800 up to 6 times and standard mobiles up to 12 times.

The powermonkey-eXtreme has two output channels; one channel outputs 700mAh max (standard USB) whilst the DC port outputs 2.1Amps max to support the Apple iPad and other tablet computers.

IP67 rated – meaning it is waterproof for 30 minutes up to 1 metre – and shock resistant, the powermonkey-eXtreme is perfect for the outdoor, marine and adventure enthusiast, as well as military and aid agencies. Featuring an LCD screen, which displays battery capacity level and working status (on/off), its unique one touch friction swipe on/off control is designed so the unit can only be turned on once connected to a device, and cannot be accidentally switched on when not in use. When the 5V device or tablet computer is fully charged, the auto shut-off function means the powermonkey-eXtreme will turn itself off after 2 minutes, so the user does not have to monitor the charge state of the device being charged – thus saving power.

powermonkey-eXtreme

The powermonkey-eXtreme can be recharged in three ways: via the universal mains charger, via the solar panel or via USB.

The rugged, clam-shell design solar panel offers 3 watt max output, allowing full recharge of the powermonkey-eXtreme within 15 hours in optimum light conditions. The powermonkey-eXtreme also has a solar energy detection feature that activates the incorporated state-of-the-art MPPT (maximum power point tracker) technology, allowing the solar panel to charge the powermonkey unit more efficiently in low-light conditions. Users can also simultaneously use the solar panel to charge the powermonkey-eXtreme whilst it is charging their device. The solar panel can be attached to tents or rucksacks

via the included Velcro strap, so it is perfect for hiking and is designed to take the knocks and spills of both the power-hungry adventurer and the busy traveller.

The powermonkey-eXtreme unit measures 145 x 59.5 x 28mm, whilst the solar panel measures 171 x 96 x 18mm when folded. The unit has very low static wastage (meaning you can leave it for up to 1 year and it will still hold 75% of its charge), and includes a whole host of safety features to give you total peace of mind. Available in four striking colours: Electric Blue, Graphite Grey, Safety Yellow and Vibrant Red.

Kit Contains:

- powermonkey-eXtreme battery unit
- Solar panel
- Universal mains charger, including interchangeable heads for UK, USA, EUROPE & AUS
- 9 mobile device tips (monkeynuts)
- Black travel pouch

Safety Features:

- Short-circuit protection
- Overload protection
- Low voltage protection
- Reverse discharge current protection

Parameters:

- Input: 5V 2.5A
- Output: USB port: 5V 700MAh and DC port 2.1A
- Battery Chemical: Lithium Polymer
- Energy: 33.3 WH
- Static power waste <50 μ A
- LCD display
- Weight: TBC
- Dimensions:
powermonkey-eXtreme unit 145 x 59.5 x 28mm
solar panel 171 x 96 x 18mm

SLIMLINE SOLAR POWERED CHARGER WITH INTEGRATED BATTERY SOLARMONKEY ADVENTURER

**“I WOULD VIEW THE CHARGER
AS AN ESSENTIAL COMPONENT
OF ANY FUTURE EXPEDITION”**

The solarmonkey adventurer is the first Powertraveller solar charger to feature an internal battery which, in optimum light conditions, can be charged by the solar panels in just 8 to 12 hours. When adventurers finally stop after a day's exploring the solarmonkey adventurer can carry on charging itself and other devices efficiently in low light conditions thanks to the maximum power point tracker (MPPT) technology within it and, when the sun finally sets, the internal battery can also keep your devices powered through the night.

All Powertraveller products undergo extensive testing and the solarmonkey adventurer is no exception. Feedback from the company's most extreme brand ambassadors was really positive and they loved the bespoke travel case. This has been developed using toughened materials and includes integral fixings, straps and a carabiner so that the solarmonkey adventurer is well protected and can be firmly secured to a backpack to make the most of the day's sunlight to recharge the internal battery unit while on the go. There are also pockets within the case to hold your cables and tips.

One of the features of the solarmonkey adventurer is that it can simultaneously charge the unit and recharge a device via the USB port. The bespoke travel case allows easy access to the USB port – perfect for saving time when you need to check if you have missed that important telephone call or check your coordinates on the GPS.

Before embarking on your next adventure, you can pre-charge the internal battery using the International Mains Charger, available separately from Powertraveller.com

COMPACT ALUMINIUM FOUR WAY USB HUB SPIDERMONKEY

**"THE SPIDERMONKEY IS THE
IDEAL ACCESSORY FOR THOSE
WANTING TO CHARGE MORE
THAN ONE DEVICE AT A TIME."**

**JERRY RANGER, CEO,
POWERTRAVELLER LTD.**

The spidermonkey is a sleek, compact hub compatible with all mobile devices that can be recharged via USB. Designed to be as space efficient as possible and to fit stylishly alongside your essential devices, the spidermonkey features four USB charging ports. Two are specifically designed with self-sensing technology for your Apple devices such as iPad, iPhone or iPod. This feature automatically detects when your device is attached and changes the charging parameters accordingly. The third and fourth USB ports have been designed primarily with Samsung and Nokia devices respectively in mind but will support any mobile device that can be charged via 5V USB e.g. cameras.

Ready to use straight out of the box, the spidermonkey comes with a International Mains Charger which works in over 150 countries worldwide but it can also be powered from your computer's USB port, making it the perfect desktop product for those needing to keep devices charged throughout the day. Alternatively, you can power the spidermonkey via our gorilla range of chargers through the 5V-30V socket or via the powermonkey extreme through the 5V AC socket. Charging via the powergorilla allows you to use the gorilla's multi-voltage settings to increase the power to the USB sockets depending on your needs.

Housed in a tough aluminium case, the spidermonkey keeps all your mobile devices charged from one convenient hub.
